Lipodissolve

▶▶▶▶ Before & After Pictures of Actual Patients

Lipodissolve offers a safe, non-surgical cosmetic approach for reducing localized fat deposits. The treatment involves a series of small injections used to sculpt areas where stubborn body fat accumulates and will not easily respond to exercise and diet alone. Because there is no surgery, there is no risk from anesthesia and no downtime. The following pictures are two of Dr. Harper's actual patients taken before and after lipodissolve treatments.

Patient Testimonials

I LOVE the effects of lipodissolve on my body! Not only is my stomach flatter than I ever imagined (which I get constant compliments about), but I have noticed a shift in my metabolism. I don't seem to gain weight as easily. I strongly recommend this treatment.

Lisa

I am thrilled with the results of my lipodissolve treatments. Each thigh has been reduced by 3/4 of an inch. The soft sagging skin under my chin has been lifted and tightened. It has a youthful appearance again.

Sharon

I visited three clinics, including one that offered expensive laser liposuction. I chose Dr. Harper because I felt she offered the best lipodissolve choices in both treatment and payment options. The treatment results have been truly amazing and affordable.
